

Micro-nanotechnologies for integrated smart systems Opportunities in the Horizon Europe Programme

Henri RAJBENBACH

*European Commission
Directorate Artificial Intelligence and Digital Industries*

Unit: Microelectronics and Photonics Industry

Outline

- Introduction: Commission priorities, the European Chips Act
- Integrating micro-nanotechnologies in their diversity
- Horizon Europe, Leadership in Electronics and Photonics
 - 2021 – Functional electronics for green and circular economy
 - 2022 – Advanced multi-sensing systems

Von der Leyen Commission Priorities

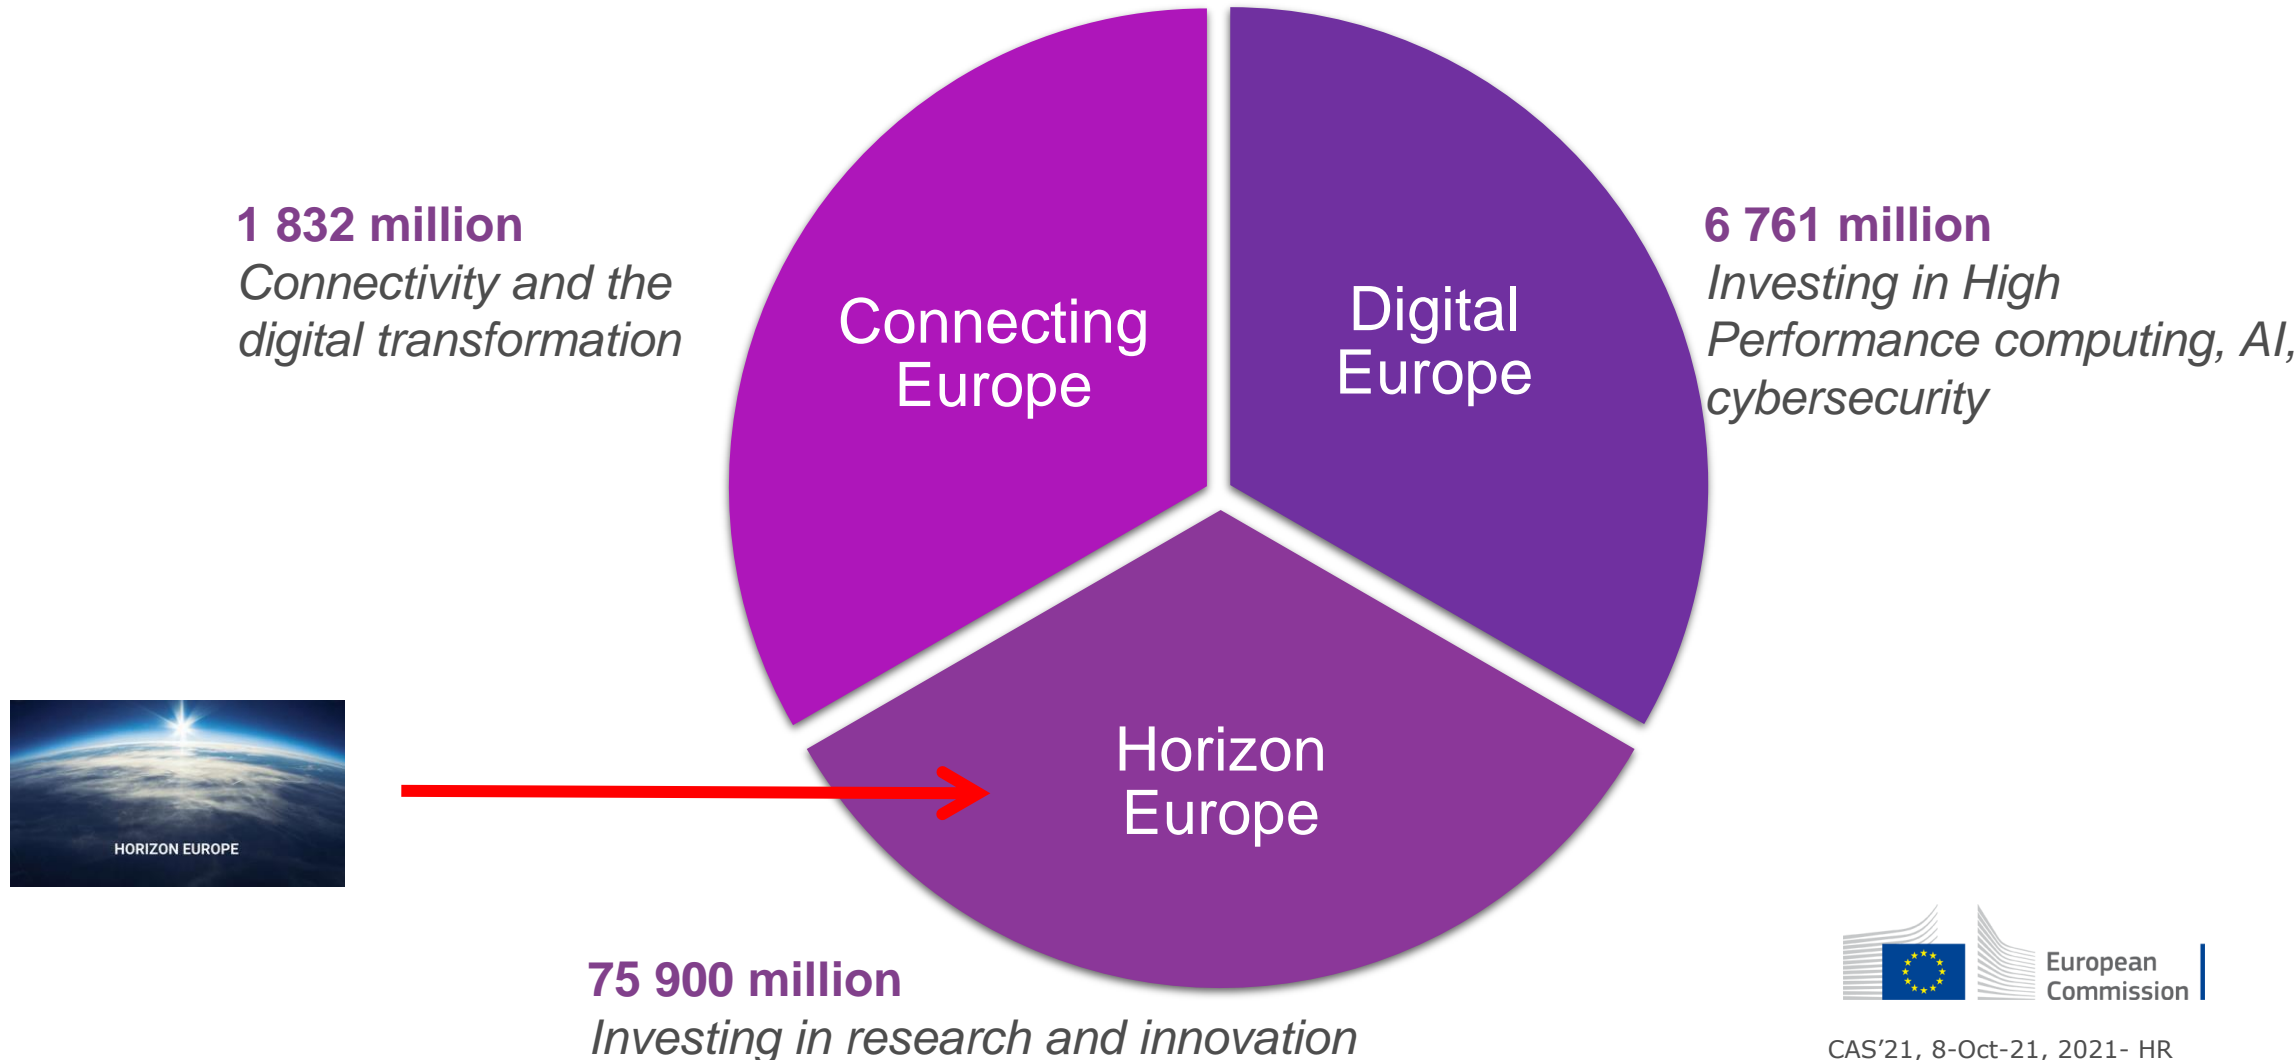

- A European Green Deal
- A Europe fit for the digital age
- An economy that works for people
- Promoting the European way of life
- A stronger Europe in the world
- A new push for European democracy

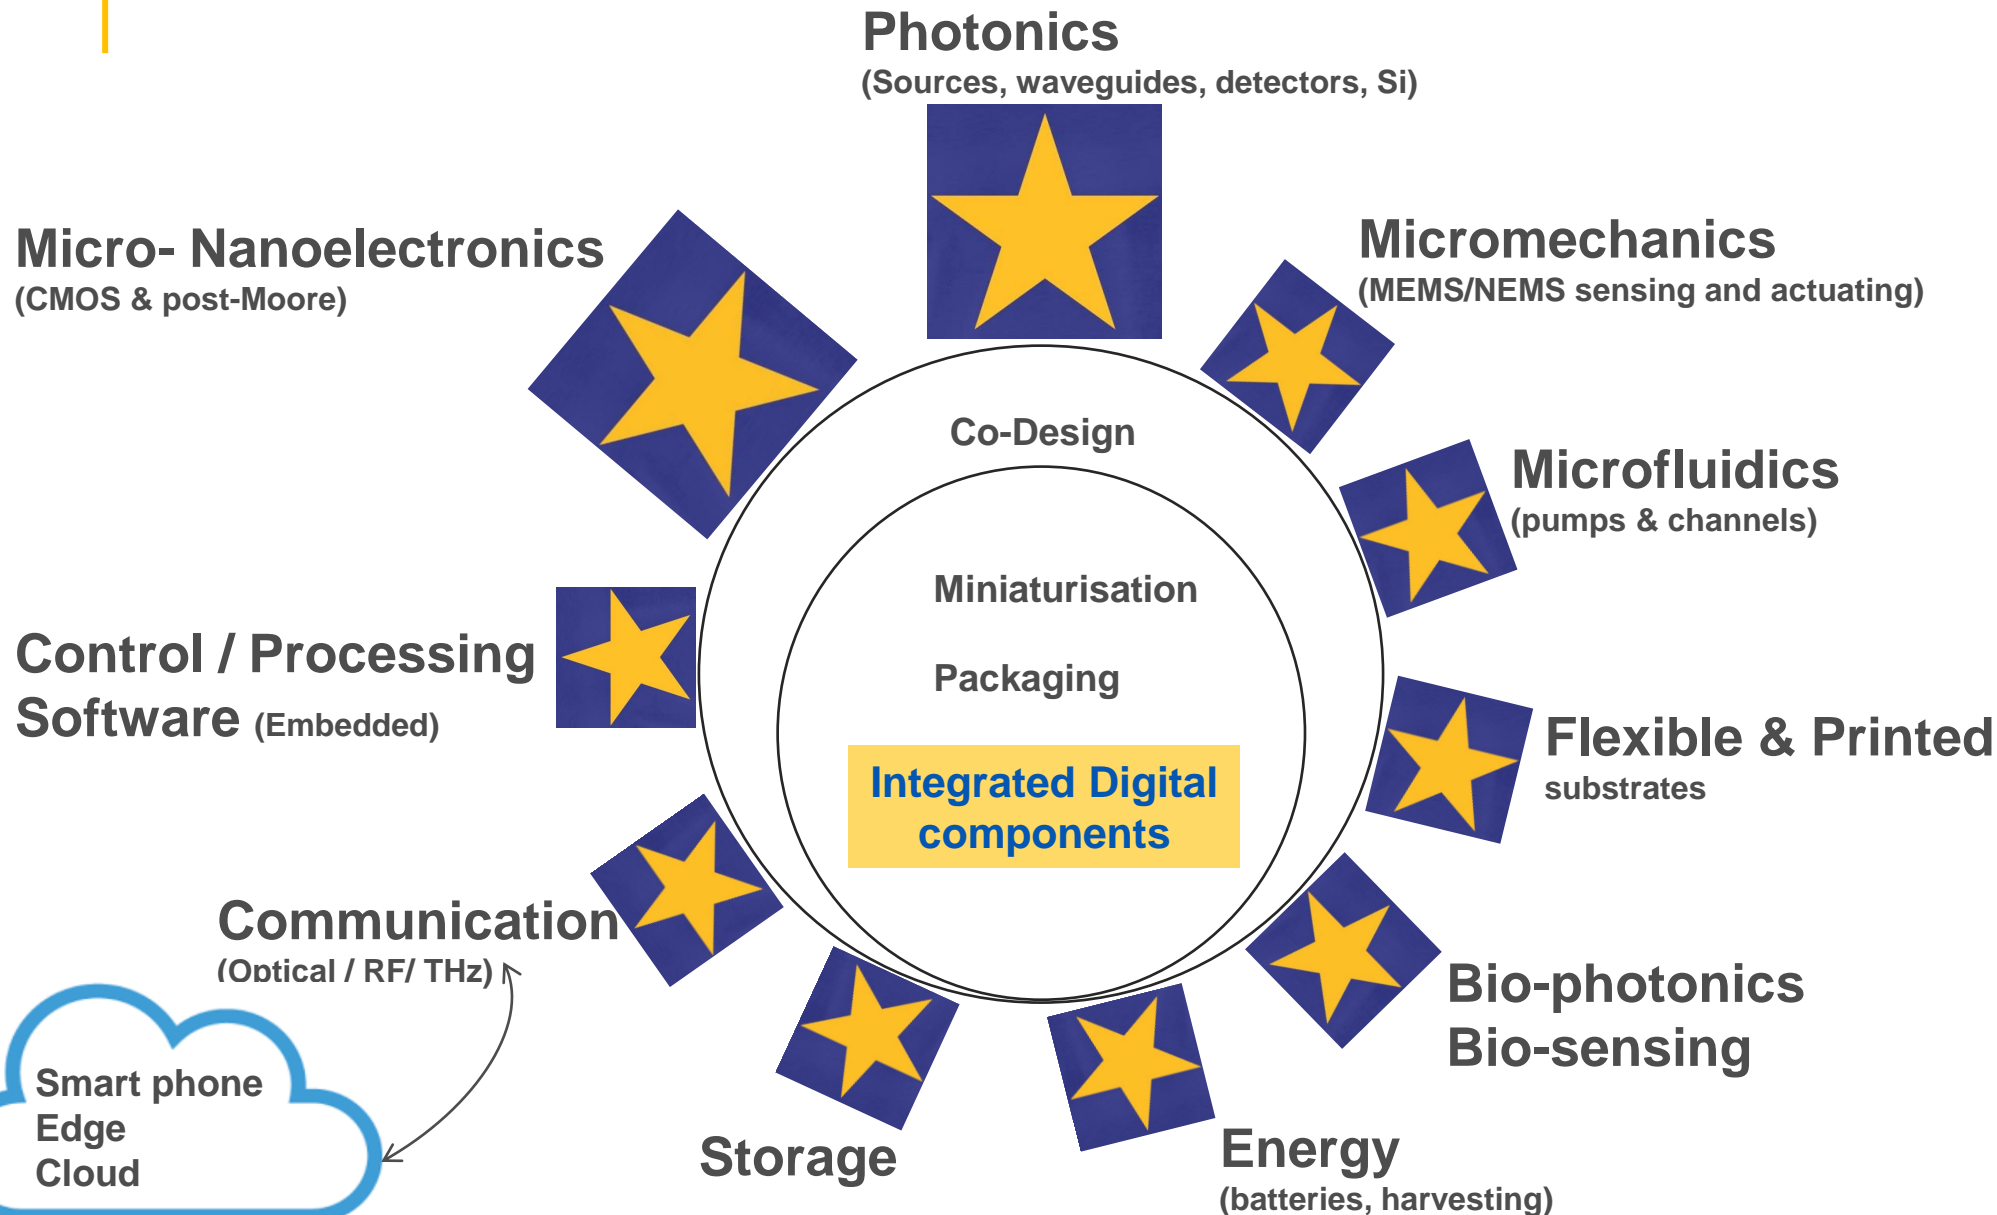

Financing the EU's digital policy

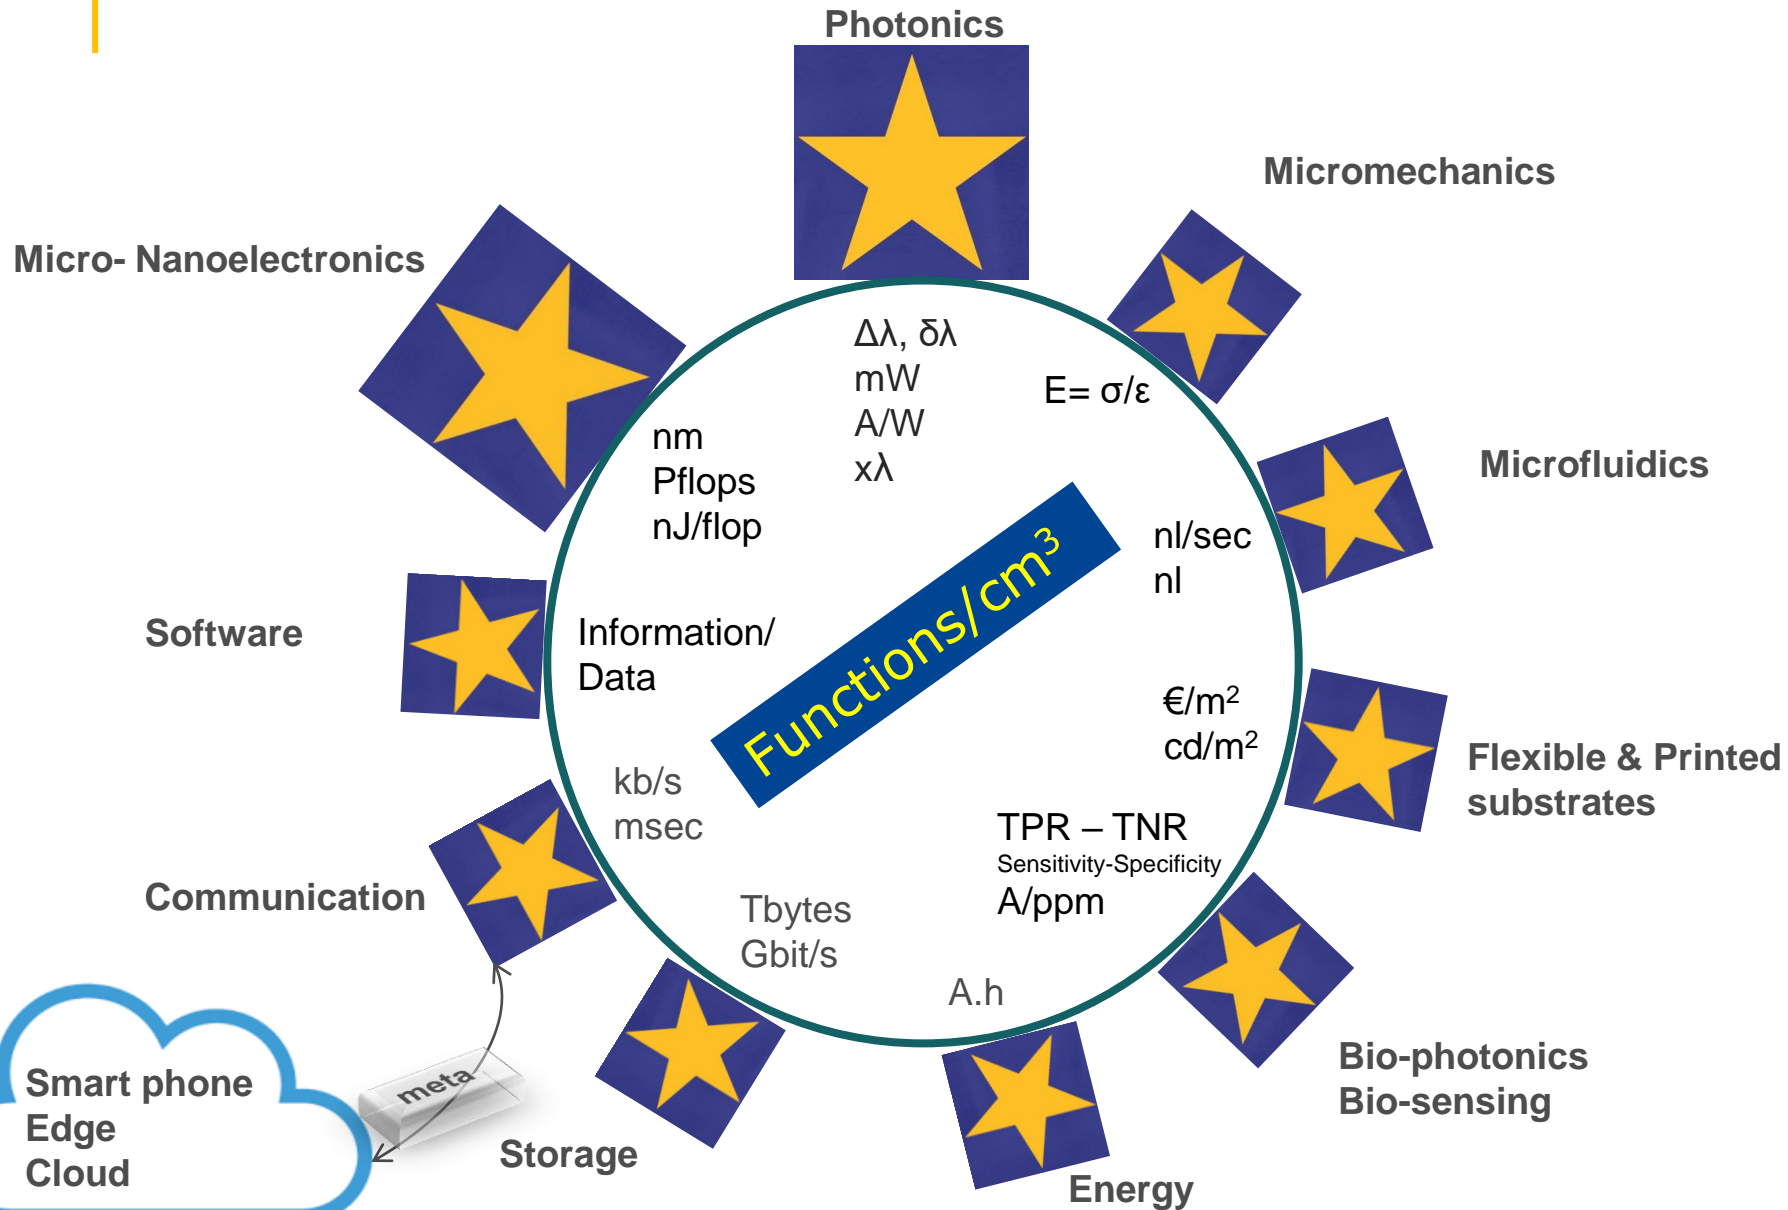

Multiannual Financial Framework 2021-2027

“Integrated in Diversity”

“Specification space

Size & Cost
 (order of magnitude)

Electronics and Photonics sections

2021

DIGITAL-EMERGING-01-01

Ultra-low-power, secure processors for edge computing (RIA)

DIGITAL-EMERGING-01-05

Open Source Hardware for ultra-low-power, secure processors (CSA)

DIGITAL-EMERGING-01-31

Functional electronics for green and circular economy (RIA)

DIGITAL-EMERGING-01-06

Advanced optical communication components (IA)

DIGITAL-EMERGING-01-07

Advanced Photonic Integrated Circuits (RIA)

2022

DIGITAL-EMERGING-01-03

Advanced multi-sensing systems (RIA)

01-31

Functional electronics for green and circular economy (1/2)

35 M€

3-5 M€/project

RIA

TRL: from 2-3 to 4-5

2021

Expected Outcomes:

- European leadership in the area of **flexible, printed and organic electronics**
- New concepts, designs and technologies in electronics for **circular economy and sustainability**.
- Next generation components and systems that will deliver **climate-neutral digital solutions**

Scope:

- **Technological breakthroughs** in functional electronics technologies green and digital transformation.
- **Eco-design principles**
 - reduction of energy and resource consumption.
 - low-cost / light- weight / less energy intensive approach

21 Oct. 2021

Focus:

- Use of different types of substrates e.g. **flexible, stretchable and conformable**
- **Integration** in textiles, plastics, glass, paper and metal.
- Improvement of system characteristics - **performance, robustness, reliability**
- High throughput and low-cost **manufacturing processes**

- Application domains:
wearables, mobility, health/well-being, agriculture and environment, energy and smart logistics

- **Eco-design principles:**
Recovery and recycling solutions
Optimisation of the use of resources
e.g. energy efficiency at system and manufacturing level, material consumption

21 Oct. 2021

01-03

Advanced multi-sensing systems (1/2)

48 M€

3-5 M€/project

RIA

TRL: from 2 to 5

2022

Expected Outcomes

- Next generation multi-sensing **photonic and electronic** systems →
 - increased integration of new functionalities, decreased size
 - cost-effective manufacturing.
- Support of a European **strategic autonomy** →
 - Key integration and packaging technologies
 - Manufacturing value chains.
- Contribution to the **green deal** objectives →
 - High levels of reuse/repair/repurpose
 - Recovery and recycling of waste and materials
 - Reduction of overall power consumption by at least a factor of 2.
- Application sectors (**broad**) →
 - healthcare and well-being
 - environmental monitoring and protection
 - transport and automated driving
 - Manufacturing
 - Aerospace and security

2022

Implementing the
Photonic partnership

Scope

- **Breakthroughs** in sensor systems:

Combining: Component development + System integration + Packaging + cost-effective manufacturing
Acquisition + Processing + Interpreting of vast amounts of sensory input data

- Reduction of overall **energy consumption**
- Modular approach with interchangeable components operating in a platform environment
- The sensing functionality should build on **technologies related to light**

Integration with:

- **microelectronics**
- **micro-nano-mechanical,**
- **micro-fluidic**
- **Magnetic**
- **radio frequency**
- **bio-chemical technologies.**

2022

KDT-JU

“Priority topics” to be considered for part (?) of the budget (WP2021)

Processor design for Artificial Intelligence at the edge (IA)

Open-source hardware base infrastructure (RIA or IA)

Eco-designed electronic smart systems supporting the Green Deal objectives (RIA or IA)

A Pan-European chip infrastructure for design innovation (IA)

TRL (?)
